Create Tic Tac game

Create a simple Tic Tac Toe game using pure JavaScript.

First create a basic structure for the game. First make sure to create a user interface. Let's break it down into small pieces. So that it is easy to maintain for us.

- Title
- 3×3 grid
- Display the information for the current player's turn.
- Display who won the game.
- Display if the game end with draw.
- Restart button to restart the entire game.

Now let's get into the game flow for a cell click.

- Track any clicks that click on our cell.
- Check for the valid move and make sure if an already played cell has been clicked.
- Update the game state.
- Validate the game state.
- Update the changes made into the UI.
- Repeat and lastly end the game.

Refer Below Screenshot for output

Tic Tac Toe
